

Healthy Probiotics for the control of Mould and Odours

Complete odour control for homes, offices and cars

Inhibits growth of mould and fungi

Odour protection for bins and drains

Kills existing mould infestations

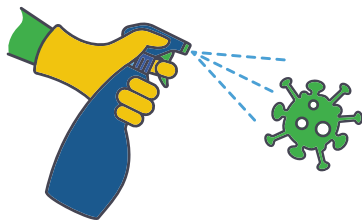

Non staining - safe for fabrics

Non toxic - safe for children and pets

EnviroTouch contains healthy probiotics for the control of mould and odours. It forms a barrier on surfaces preventing mould and fungi from propagating.

The natural ingredients in **EnviroTouch** create unfavourable conditions for mould growth and helps prevent offensive odours developing. Both indoors and outside in drains and areas where bins and rubbish is stored.

EnviroTouch lays down an invisible barrier that leverages a unique enzyme and probiotic formula that is both active and passive. When temperature and humidity give rise to mould-growing conditions, the probiotics out-compete mould for nutrients and moisture, preventing mould from taking hold.

DIRECTIONS FOR USE:

FLOOD REMEDIATION:

To prevent mould and bacterial growth on flooded surfaces, add undiluted at 50- 80ml/sqm as soon as practical after flood. Highly concentrated, fully biodegradable. When dried, safe for children and pets.

MAINTENANCE:

Dilute one part of EnviroTouch with four parts water (1:4). Re-apply after each clean.

Natural Mould and Odour Control for Use Indoors and Outdoors

EnviroTouch creates biochemical barrier preventing mould from propagating even at the best combination of humidity and temperature.

Through its integrated fungal growth inhibitors and environmentally safe pH modifiers **EnviroTouch** stops fungal growth.
